## About Me

I'm a self-taught Frontend developer who found a passion for building web applications. I was introduced to programming when I was trying to figure out **how** and **why** certain websites are just **different**. I was fascinated by clean UI designs and effective, interactive functionalities that I experienced on web that it eventually led myself to learn the skills to build on my own. Ever since I wrote the first line of code, I am continuously learning to become a better developer. I care about writing better code, gaining the right knowledges I need to build the product, user experience and more.

## Skills & Tools

HTML, CSS / SCSS, JavaScript / ES6, React, Redux, Styled Components, GSAP, Canvas, Webpack, Git, GitHub

## Projects

### To Do

A todo app with 4 different views (Focus, Daily, Weekly, Monthly). Core things I utilised are React router, Context API, Form submit, Date object, Event bubbling, Scrolling event and dealing with complex component tree & styles

React, Context API, GSAP

### Timer

Minimalistic timer application that I built to actually use for my study time. The app can switch between timer or stopwatch view on the fly. It incorporates dark mode toggle. I learnt a lot about Object-oriented JavaScript.

HTML, CSS, Vanilla JS

### Music Experience App on Web (Minor thesis)

For my Professional Project module (Minor), I am building a music experience application on the web with the purpose of empowering musical creativity for general internet users. The application features a simple synthesizer that users can interactively manipulate the sound and see the generative 3D visuals.

React, Audio API, Three.js

## Work Experience

### Pig's Ear Restaurant, Dublin 2, Ireland Sep 2019 - Mar 2020

Floor staff - worked in an enthusiastic and dynamic work environment providing a professional customer service for high quality dining experience

## Education

### Technological University Dublin

BA (Hons) Commercial Modern Music (BIMM) - Songwriting

### Udemy

Web Development Bootcamp

Git a Web Developer Job: Mastering the Modern Workflow

### Twitter Clone

Full stack Twitter clone app. It implements authenticated routes, storing/displaying user generated content and custom react hooks and etc.

React, Firebase (Auth, Firestore, Storage)

### Design Agency (Landing page)

Fun landing page for virtual design agency. I used GSAP for creating the animation. I focused on understanding creating the usable components and how to effectively develop UI for better use experience.

React, GSAP

2018 - 2018
